                                                                                                                                                                                                                                                                                          1 MSGGGNIKVVVRVRPFNAREIDRGAKCIVRMEGNQTILTPPPGAEEKARKSGKTIMDGPK 60
                                                                                                                                                                                                                                                                                                       ATP-dependent, plus end-directed microtubble motor protein that is a member of the unc-104 family and kinesin superfamily. The invention provides TL-gamma nucleic acids (see X8766), proteins and antibodies, and methods of screening for TL-gamma modulators potentially useful for treating hyphal fungal infections and diseases caused by muctaed TL-gamma, e.g. neurodepeneration involving anterograde axonal transport, such as Alzheimer's, scherosis Detection of TL-gamma, diseases or amyotrophic lateral hyphal and non-hyphal fungal infections.

The present invention describes the coding and protein sequences of the human Kinesin-like protein MKID. It is thought that the protein could be involved in neurological disorders, infertility, spontaneous abortion, neonated chronosome disorders, amenybody and cancers. This is due to its function in the movement of microtubules. The protein shows homology to the murine KIFIA and KIPIB proteins. The sequences disclosed in the invention can be used in the isolation of similar human proteins and in ercor, production in addition, the bialiels markers shown can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             KLIMP; kinesin-like motor protein; cytostatic; anticonvulsant; human; anti-Alzheimer; anti-Parkinsonian; anticiabetto; anti-ulcorative; cancer; immunomodulatory; anti-lifliamatchy; anti-AIDS; antitheumatic; treatment; antiarthritic; diagnosis; neurological disorder; vesicular transport.

This invention describes a novel human kinesin-like motor protein

(Kinthe) (1) which has cytostatic, anti-latchemer's,

conti-parkinsonian, antidiabetic, anti-ulocorative, immunomodulatory,

anti-inflammatory, anti-AlDS, anti-hammatic and antiarthirtic activity.

Continital and the protein it encodes may be used in the prevention, treatment

and diagnosis of diseases associated with inappropriate Kink expression

continity of protein it encodes may be used in the prevention, treatment

continity of diseases associated with inappropriate Kink expression

continity of the protein in the prevention, treatment

continity in the protein in the prevention, treatment

continity in the protein in the prevention of the protein in the prevention of disorders of the prevention of the protein in the protein in the protein in the prevention of the protein in the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2
                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid sequences encoding a human kinesin-like motor protein (KLIMP) useful for the treatment of diseases associated with imappropriate KLIMP expression such as cancers, neurological disorders and disorders of vesicular transport.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         123 K--EHGVIPRICQDMFRRINELQKDKNLTCTVEVSYLEIYNERVRDLLNPSTKGNLKVRE 180

F22373 to F22421 encode the human secreted proteins given in B63134 to B63134 to B63134 to B6313 to B6321 sepresent more human secreted proteins and complete monologus to them. Human secreted proteins and and polypeptides homologus to them. Human secreted proteins have activities based on the tissues and cells the genes are expressed in Examples of contributes include: immunosuppressive; antiriritirity antirhematic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; noncript; enuroprotective antibateral; virturdisf funditional and comply and polynolocities and proteins can be used to prevent, treat or ameliotate a medical condition in e.g. humans, mice, cabbits, gosts, horses, cats, ados, chickens or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a disorders e.g. candiac arrest, cerebroascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. cardiac arrest, cerebroascular disorders e.g. corneal infection should bacteria, virtuses and fundi and coular disorders e.g. corneal infection in propilities can also be used to all dound bealting and epithelial cell proliferation, to prevent skin aging due to confirm to maintain organs before transplantation, for supporting cell.
                                                                                                Humban, secreted protein, diagnosis, immunosuppraesive, antiarrhitic; antihemmutic; antihoculferative, oytostatic, cardiant; vasotropic; cerebropic cardiant; vasotropic; cerebropic cardiant; vasotropic; cerebropic cardiant; cardiant dispersion that the most of the that cardial state of the cardiant of a thinkins hyperpoil ferative dispersion cardian arrest; rheumatoid atthinkins; hyperpoil ferative dispersion; cerebral inschemia; angiogenesis; nervous system dispersion and inschemia; angiogenesis; arrest dispersion; feration; wound healing; skin aging; food additive; preservative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. F72364 to F2372 and 863113 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated nucleic acid molecule encoding a human secreted protein used in preventing, treating or ameliorating a medical condition
Human secreted protein sequence encoded by gene 5 SEQ ID NO:116.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 489-491; 533pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (HUMA-) HUMAN GENOME SCI INC. antipoliferative. Animanosuppersorre, minimanosuppersorre, minimanosuppersorre, minimanosuppersorre, minimanosuppersorre, minimanosuppersorre, minimanosuppersorre, montropic, meropercettive; antibacterial; virudide; fundatoides and optitual mological. The polyvucicotides and proteins can be used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also to read in diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a cautofinance disease e.g. rheumatoid arthritis, hyperproliferative autofinance diseases e.g. rheumatoid arthritis, hyperproliferative cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrial properties can also be used to aid wound to main and epithelial cell proliferation, to prevent skin aging due to main minimal causes and cell cardiac arrest and cell proliferation, to prevent skin aging due to minimal caused by a paterial proliferation, to prevent skin aging due to main minimal caused by a paterial proliferation, to prevent skin aging due to main minimal caused by a paterial proliferation, to prevent skin aging due to main main and epithelial cell proliferation, to prevent skin aging due to main main and paterial proliferation and caused by a paterial proliferation and caused by a main and paterial arrest caused by a main and paterial arrangements.
                                                                                                                                                                                                                                                                                                                                                                         culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. F22164 to F2372 and B63133 represent sequences used in the exemplification of the present invention.
polypeptides homologous to them. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Bxamples of activities include immunosuppressive; antiarthritis; antirheumatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         59 PKAFAFDRSYWSFDKNAPNYARQEDLFQDLGVPLLDNAFKGYNNCIFAYGQTGSGKSYSM 118

Compounds including polypeptides that contain at least an epitope of the L. chagasi acidic ribosomal antigen LCOP are useful in a variety of immunosasys for detecting Leishmania infection. Portions of LCPO (142164) contg. at least the 17 C-terminal amino acids (142165) have been found to generate a signal in an ELISA that is equivalent to that generated by the full length LCPO. A combination polypeptide may also be used, comprising an LCPO epitope along with an epitope derived from the Leishmania K39 antigen (142165) prefine K39 repeat unit antigen having the sequence given in W03690.
                                                                                                                                                                                                             New Leishmania acidic ribosomal P-protein family poly:peptide - used to develop proda. for diagnosis, detection and protection against Leishmania infections

Detection of antibodies directed against this repeated unit in a patients sample is indicative of leishmaniasis. The artiquate repeat unit can itself be used as a vaccine to protect against infection by a leishmania parasite.
                                                                                                                                                                                                                                                                                                                                                                               35;

The present sequence represents CENP-E (centromere-associated protein-E) of Kacopus. The protein has at least one of plus end-directed microtubule motor activity, APrase (adenosine triphosphatase) activity and microtubule binding activity. CENP-E is the motor that powers chromosome movement toward microtubule plus ends and is essential for congression of chromosomes during mitosis. Modulators of CENP-E activity are lead therapeutic, hioagricultural and diagnostic agents, e.g. for treatment of unwanted cell proliferation (typical of many examples are tumors and metastases; vascular malfunction; inflammatory and immine diseases; angiogenesis; hypertension; restenosis; and fungal infections), also as plant protection agents (selective herbicides, fungicides and insecticides) and plant growth regulators or activators for improving yields. CENP-E is also a diagnostic marker for dividing cells, including
                                                                                                              plus end-directed microtubule motor activity; chromosome congression; microtubule binding activity; ohromosome movement; mitosis, melectubule binding activity; ohromosome movement; mitosis, melestasis, vascular malfunction; fundizammatori, tumor, melesase; anglogenesis; hypertension; restenosis; fungal infection; selective herbicide; fungicide; insecticide; plant growth regulator; activator; cancer cell marker.
                                                         Amino acid sequence of centromere-associated protein-E (CENP-E).
                                                                                                centromere-associated protein-E; ATPase activity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Centromere-associated protein-E and related nucleic acid

Separation of selected molecules, e.g. DNA, from complex mixtures - uses specific apparatus to allow the selected and selected ways along motor proteins, and be activally transported and separated away along motor proteins. micro:tubules

Claim 3; Column 25-28; 24pp; English.

A method has been developed of separating a selected molecule from a matture of molecules. The method comprises: (a) a separation device comprising a loading reservoir and a receiving reservoir coupled by a channel with microtubles immobilised on its surface and aligned parallel control and are channel; (b) loading the loading reservoir with an aquebous solution of the mixture of molecules; (c) adding a mocortigand composition and ATP to the solution, where the molecules microtubles, and moving in the presence of ATP as source of chanical energy, and (ii) a ligand coupled to the solution, where the immobilised is capable of binding the selected molecule, so that the ligand is capable of binding the selected molecules to the immobilised microtubules, and moving in the presence of ATP as source of chanical energy, and (ii) a ligand coupled to the motor protein where the ligand is capable of binding the selected molecules to the immobilised microtubules and transports the bound selected molecules along the creciving reservoir. The method and the system are used for the separation of specific molecules from complex mixtures. The molecule to the presence of the separation of specific binding ligands. Activation of these enables than to travel the specific binding ligands. Activation of these enables than to travel the specific binding ligands. Activation of these enables than to travel then be removed easily without contaminants of other mixture particles. Drosophila kinesin for use in the method of the invention.

```
to a longitudinal axis of the channel; (b) loading the loading reservoir with an aqueous solution of the mixture of molecules; (c) adding a motor-ligand composition and APP to the solution, where the motor-ligand composition and APP to the solution, where the motor-ligand comprises, (i) a processive motor capable of attaching to the immobilised microtubules, and moving in the presence of ATP as source of chemical selected molecules, so that the ligand bluds the selected molecule and the motor protein attaches to the immobilised microtubules and transports the bound selected molecules along the receiving reservoir. The method and the system are used for the separation of specific molecules from osplex mixtures. The molecule to separation of specific molecules from complex mixtures. The molecule to the separation of specific molecules from complex mixtures. The molecule to the separation of the specific bluding ligands, activation of these enables them to travel cown a preformed channel in a specially made piece of apparatus. They can then be removed easily without contaminants of other mixture particles. The present sequence represents the Nureminal Adl amino aid residues of brosophila kinesin for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 66 RSYWSFDKNAPNYARQEDLFQDLGVPLLDNAFKGYNNCIFAYGQTGSGKSYSM---MGYG 122

The method comprises; (a) a separation device comprising a bodding reservoir and a receiving reservoir coupled by a channel with microtubles immobilised on its surface and aligned parallel

A method has been developed of separating a selected molecule from a maxture of molecules. The method comprises; (a) a separation device comprising a loading reservoir and a receiving reservoir coupled by a channel with microtubles immobilised on its surface and aligned parallel to a longitudinal axis of the channel; (b) loading the loading reservoir with an aqueous solution of the mixture of molecules; (c) adding a motor. Ingand composition and AFP to the solution, where the motor-ligand composition and AFP to the solution, where the motor-ligand composition and AFP to the solution, where the motor-ligand composition and AFP to the solution, where the motor-ligand comprises, (i) a processive motor copable of attaching to the immobilised confortubules, and moving in the presence of AFP as source of chemical energy, and (ii) a ligand coupled to the motor protein, where the ligand binds the selected molecules and the motor protein attaches to the immobilised microtubules and transports the bound selected molecules along the receiving reservoir; and (a) removing the selected molecule from the receiving reservoir. The method and the system are used for the receiving reservoir. The method and the system are used for the persence of the separation of specific binding ligands. Activation of these enables them to travel the specific binding ligands. Activation of these enables them to travel then be removed easily without contaminants of other mixture particles.
                                                                                                                                                                                                                                                                                                             Separation of selected molecules, e.g. DNN, from complex mixtures - uses specific apparatus to allow the selected molecule to bind to motor proteins, and be actively transported and separated away along

involved in tolerance to environmental stress in plants. The sequences (198950-298365) are useful for producing a transgentor plant having enhanced tolerance or resistance to environmental stress conditions such as anserobic, flooding, cold, dehydration, drought, heat stress or salinity. This is useful for producing improved yield, growth development and productivity under environmental stress conditions, and also provides growth of crops in areas where they cannot grow without the induced osmotoferance. Sequences Y7925-984 represent polypeptide sequences from A. Thallana that are encoded by the genes involved in
                                                                                                                                                                        plant; transgenic plant; anaerobic; flooding; cold; heat stress; salinity; osmotolerance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolation of polynucleic acids useful for producing transgenic plant by isolating genes involved in tolerance to environmental stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |: || :::| | |::| | ::: | ::| : || || |: || :::| pgltpratkelf---nilkrdskrfsfslkaymvelyqdtlvdlllpksarrlkleikkd 1051

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence 4, M

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Description
